

Capsule Slip Ring LPC-56A

This unit can be used in any electromechanical system that requires unrestrained, continuous rotation while transferring power or data from a stationary to a rotating structure.

The LPC-56A capsule slip ring is a standard, off-the-shelf unit that uses gold contacts at the rotary interface. Color-coded lead wires are used on both the stator and rotor for simplifying electrical connections.

Using a 90° V-groove ring design for each ring, the LPC-56A provides smoother running, lower torque and lower electrical noise than competitive slip rings. It is available in 6, 12, 18, 24, 36, 56 circuit models.
